Sushmey Nirmal

United States | (303)-725-9945 | linkedin.com/in/Sushmey | Sushmey.com | sushmeywork@gmail.com

Education

University of Colorado, Boulder | Master of Science in Computer Science — May 2027
Coursework: Neural Networks and Deep Learning, Datacenter Scale Computing, Data Mining

VJTI, Mumbai | Bachelor of Technology in Information Technology — June 2023
Coursework: Database Systems, Data Structures and Algorithms, Machine Learning

Skills

Languages: Java, Python, SQL, JavaScript, TypeScript
Frameworks & Technologies: GCP, Django, Flask, Angular, Express, NodeJS, Docker, LangChain
Databases: SQL Server, Hive, Dremio, MongoDB

Experience

eBay — May 2026 – August 2026
Software Engineer Intern — *San Jose, CA*

- Reduced eBay Live production triage by **70%**, from about two days to **4–5 hours**, by fusing **15+ telemetry sources** into chronological user journeys.
- Developed a **retrieval-augmented LLM pipeline** that queried Grafana logs, normalized cross-platform telemetry into unified user journeys, and generated diagnostic insights and chat sentiment analysis.
- Engineered identity resolution and state inference pipelines to correlate fragmented user signals across **backend, Android, iOS, and Web systems** into actionable debugging workflows.

Wells Fargo — August 2023 – July 2025
Software Engineer — *Hyderabad, India*

- Designed and developed a data fetching platform using Dremio, exposed via internal APIs to support UI applications and bulk ETL workflows used by **40+ developers**.
- Improved data reliability by implementing schema validation and freshness checks, reducing stale data issues and increasing adoption across **24+ analytics and reporting teams**.
- Took ownership of a production data system, making design tradeoffs around schema evolution, validation logic, and performance under changing product requirements.

Barclays — June 2022 – August 2022
Software Engineering Intern — *Pune, India*

- Built an end-to-end Trade Feed File Generator using Angular and Java Spring Boot, reducing file generation time from **days to hours** and achieving a **96% optimization**.
- Implemented RESTful APIs to enable seamless communication between frontend workflows and backend services in a time-sensitive financial environment.

Open Source Experience

Zulip Terminal | Link — September 2022 – May 2024
Open Source Contributor

- Improved application stability by handling network timeouts and blocking unsupported text-based browsers, preventing runtime crashes.
- Enhanced user experience by implementing read receipts, message copy functionality, and clearer identity handling for users with identical usernames.
- Wrote and executed unit and integration tests, logged and resolved defects, and debugged runtime failures in production and open-source systems.

Projects

Personal AI Agent (Python, Ollama, Agentic AI, Telegram API, Google APIs) Link

- Built a locally hosted AI agent using Ollama and tool-calling to autonomously execute multi-step tasks across 15+ capabilities, including calendar management, email workflows, and online purchasing.
- Engineered a human-in-the-loop purchasing workflow that identifies requested products, fetches total costs including shipping and taxes, and executes orders only after explicit user confirmation.

BudgetIQ (Flask, GCP, RabbitMQ, GenerativeAI) Link

- Built a web app for analyzing credit card statements and generating spending insights using Flask and GCP services.
- Deployed serverless architecture on Cloud Run, integrated Cloud SQL for storage, and used Vertex AI (Gemini 2.5 Flash Lite) for transaction analysis.

Better Call RAGs (LangChain, ChromaDB, GenerativeAI) Link

- Developed an AI-powered legal assistant using Retrieval-Augmented Generation (RAG) architecture to enable natural language querying over the Cambridge Law Corpus.
- Engineered a summarization and Q&A system that delivers accurate, context-specific answers strictly grounded in the source corpus, enhancing reliability and eliminating hallucinations.
